Rainfall Commons
Scientific Python Developer

22 October 2026

Dear hiring team,

I am applying for the Scientific Python Developer role at Rainfall Commons. The work you describe connects with my experience preparing climate datasets for research.

At the Institute for Weather Studies, I wrote Python scripts that convert 40 TB of model output into analysis-ready NetCDF files. I also adapted an existing quality-control tool to flag corrupted model runs before analysis. These examples show the data preparation and checking work I could discuss with your team.

I am the main developer of rainfall-stats, a Python package released on PyPI with three releases. I would welcome the chance to discuss how this work relates to your team’s needs.

Kind regards

Alex Example
